IMPRESSION PLAN

Transitional	Care
--------------	------

Swelling	Patient may have swelling. It is the enlargement of organs, skin, or other body parts. It is caused by a buildup of fluid in the tissues. The extra fluid can lead to a rapid increase in weight over a short period of time
Tremors	Patient may have cyclical movement of a body part that can represent either a physiologic process or a manifestation of disease. Intention or action tremor, a common manifestation of cerebellar diseases, is aggravated by movement. In contrast, resting tremor is maximal when there is no attempt at voluntary movement, and occurs as a relatively frequent manifestation of parkinson disease.
Catheter	Patient may have a tubular medical device for insertion into canals, vessels, passageways, or body cavities for diagnostic or therapeutic purposes (as to permit injection or withdrawal of fluids or to keep a passage open)

Advanced Care Planning: Advanced care planning with patient, time spent 15 minutes. Reviewed care plan options such as code status, intubation and hospitalization. Reviewed risks of cardiac resuscitation including rib fracture. Reviewed prolong life expectancy and benefit to aggressive care and treatment.

Orders: AS ATTACHED Discussion Notes:

Current condition, medication regimen, plan of care as above discussed. Continue current medications and plan of care. Frail elderly, on medications requiring regular monitoring. Follow labs closely. Medications prescribed using electronic prescribing system. I verify that a total of 60 minutes was spent on this encounter by the Nurse Practitioner directly. Follow-up visit mentioned in plan.

Date of Service: 6-30-2024

Circle "Yes" or "No" for each statement below

Why it matters

	Otto Till Wolfer					
Yes	✓ No	I often feel sad or depressed.	Symptoms of depression, such as not feeling well or feeling slowed down, are linked to falls.			
Yes	✓ No	I take medicine to help me sleep or improve my mood.	These medicines can sometimes increase your chance of falling.			
Yes	✓ No	Sometimes I feel unsteady when I am walking	Unsteadiness or needing support while walking are signs or poor balance.			
Yes	✓ No	I need to push with my hands to stand up from a chair	This is a sign or weak leg muscles, a major reason for falling			
Yes	✓ No	I steady myself by holding onto furniture when walking at home.	This is also a sign of poor balance.			
✓ Yes	□No	I am worried about falling.	People who are worried about falling are more likely to fall.			
✓ Yes	□No	I take medicine that sometimes makes me feel light- headed or more tired than usual.	Side effects from medicines can sometimes increase your chance of falling.			
Yes	✓ No	I use or have been advised to use a cane or walker to get around safely.	People who have been advised to use a cane or walker may already be more likely to fall.			
✓ Yes	□No	I have fallen in the past year.	People who have fallen once are likely to fall again.			
Yes	✓ No	I sometimes have troubles stepping up onto a curb.	This is also a sign or weak leg muscles.			
Yes	✓ No	I have lost some feeling in my feet.	Numbness in your feet can cause stumbles and lead to falls.			
Yes	✓ No	I often have to rush to the toilet.	Rushing to the bathroom, especially at night, increase your chance of falling			

Total <u>3</u> Add up the number of points for each "yes" answer. If you scored 4 points or more, you may be at risk for falling. Discuss this check list with your doctor.

This checklist was developed by the Greater Los Angeles VA Geriatric Research Education Clinical Center and affiliates and is a validated fall risk selfassessment too (Rubenstein at al. J Safety Res; 2011:42(6)493-499). Adapted with permission of the authors.
